AI IN SUPPLY CHAIN

Artificial intelligence (AI) is reshaping supply chain management by boosting efficiency, enhancing forecasting accuracy, enabling smarter decision-making, and strengthening operational resilience.

OVERVIEW

The AI in Supply Chain Program, developed by the American University of Beirut, Suliman S. Olayan School of Business (OSB), focuses on real-world AI applications in production, demand forecasting, inventory management, logistics optimization, and risk mitigation. Through a combination of executive-level lectures and guided, non-technical hands on activities, participants will develop practical literacy in how AI-driven systems shape modern supply chains and how to interpret their outputs to make informed strategic decisions.

INSTRUCTOR
MIRNA ABOU MJAHED, PHD

Mirna Abou Mjahed holds a Ph.D. in Management with a focus on Information Systems, Supply Chain, and Decision Support from NEOMA Business School (France), an MBA from the University of Houston (Texas), and a bachelor's degree in computer and communication engineering from AUB. Her academic and professional work focuses on technology-enabled supply chain decision making, supply chain collaboration, inventory management and managing uncertainty and resilience in complex supply chains.

With over a decade of professional experience in business consulting, software development, and information systems across Beirut, Houston, and Riyadh, she brings a practical, supply-chain-driven perspective to the use of new technologies in planning, coordination, and decision support.

HOW YOU BENEFIT

- Understand key AI concepts and how they apply across supply chain functions.
- Recognize how Generative AI integrates with supply chain data and workflows.
- Learn how to deploy existing generative AI tools through experimentation to understand data flows and design prompts that align system behavior with business objectives.
- Evaluate where and how AI creates value in forecasting, inventory optimization, logistics, and risk management.
- Understand how technology and data drive business operations and redefine supply chain performance and competitiveness.

WHY THIS PROGRAM

1. Innovative. It delivers an updated perspective on supply chain that is relevant to various types of industries.
2. Practical. It provides you with hands-on experience of the application of tools and techniques.
3. Short and Effective. It is designed to suit your busy schedule and aims to provide you with the know-how in 3 days.
4. Highly engaging. It includes case studies, interactive discussions, hands-on exercises, and individual contributions.

WHO SHOULD ENROLL

AUB alumni, looking to reconnect with the AUB network and renew their learning journey.

Supply chain executives, managers, and decision-makers seeking to understand how AI technologies can optimize operations and drive business growth.

Note: Participants generally come from different sectors and industries, No prior technical or coding experience is required, Proficiency in spoken and written English is necessary.

PROGRAM HIGHLIGHTS

- AI in Manufacturing & Production Planning
- AI in Demand Forecasting & Inventory Optimization
- AI in Logistics, Distribution & Supply Chain Resilience

Duration: 3 days

Dates: Q2, 2026

Fees: $1,000

Fees for AUB Alumni: $800

Location: American University of Beirut Suliman S. Olayan School of Business, (OSB) campus Beirut – Lebanon

AACSB ACCREDITED
